Sun, 21 Apr at 09:19

Hey Phil. 'Quick' scrutiny confirmation for you. If two candidates get quota in the same count and in distributing the first successful candidate's surplus, a third candidate gets elected. Then you move to distribute the second elected candidate's surplus, can the third elected candidate get votes from the second's surplus distribution?

Sun, 21 Apr at 11:20

Hi Ro. Pretty sure the answer is no.

Hmmm. This is my thinking too. Once you have quota, no further papers come your way in a future count. It doesn't appear to be doing this in my most recent test. 😞

I can check the Act, but there's no way you could have 2 parcels of votes, possibly with different

Phil Green >

transfer values, over the quota.

Yeah. And from the look of what it's doing in one of the accounts it's actually combining those two transfer values. One of the transfer values is greater than one so therefore one and one of the transfer values is something less than one and then in the next count, it seems to be transferring all papers. I've really only briefly looked at it but that's what it looks like is happening.

Bugger. I don't recall testing that scenario. Sounds like a bug.

So many possible scenarios. So hard to have confidence

I'm surprised this is an issue. The program should check for elected candidates after every single count.

I need to dedicate more time to fully reviewing the current

Text Message

16:09

Phil Green >

sheets. It was a brief review over a Sunday coffee. So also need to see what the code is doing.

Do you want me to help?

Let me look into it further, but I might like to swing some sheets past you to confirm my thinking. Thanks Phil.

No worries.

Damian Cantwell >

Sun, 21 Apr at 17:55

Hey Damian. I still need to fully confirm it but I think I may have identified a scenario where EVACS isn't counting correctly. I'll do some more reviewing tomorrow and if I think we need to put a comment up on the website and withdrawn the code I'll let you know. I could be wrong, but I thought I'd let you know ASAP.

Ok no worries Ro it's good to get ahead of any issues well done chat anytime tomorrow

Mon, 22 Apr at 08:12

Happy to throw whatever additional resources needed to get this right of course

I need to review it in more detail and review the act to see what the act says SHOULD happen in this scenario. I'll let you know

and review the act to see what the act says SHOULD happen in this scenario. I'll let you know when I have more confirmation

Thanks Ro

Thoughts on wording and action: Elections ACT has temporarily withdrawn the code for public review having identified an error in the counting algorithm under specific scenarios as a result of further ongoing testing practices. Elections ACT will resolve the issue and republish the code shortly.

How about 'The eVACS code is temporary unavailable to allow further testing by Elections ACT. It will be republished shortly.'

How about 'The eVACS code is temporary unavailable to allow further internal testing by Elections ACT. It will be republished shortly.'

Hi Phil, as discussed would you mind running your eye over the attached scrutiny sheets to confirm what I believe to be two issues. The first is that Bethany Williams, having been elected following the distribution of Braddock's surplus, continues to receive votes from Bernie Brennan's surplus distribution. Then, when distributing Williams' own surplus, the system appears to combine the two parcels (of different values).

Thanks Phil. I agree with this reading of the Act. We're now arranging with Clive to resolve the issue. He believes that the line of code that should have checked that Williams was elected may have been inadvertently removed as part of a code clean up identified by BMM.

Appreciate your confirmation!

Hi Ro

I think the scrutiny sheet is incorrect.

The relevant clause of Schedule 4 is:

6 Surplus votes

(1) Subject to clause 7, this clause applies in relation to the surplus of a successful candidate.

(2) Each ballot paper counted for the purpose of allotting votes to the successful candidate at the count at which the candidate became successful shall be dealt with as follows:

- (a) if it does not specify a next available preference—it shall be set aside as finally dealt with for this part;
- (b) if it specifies a next available preference—it shall be grouped according to the candidate for whom that preference is recorded.

(3) The count votes for each continuing candidate shall be determined and allotted to the candidate.

(4) After the allotment under subclause (3), the continuing candidates' total votes shall be calculated and, if the total votes of a candidate

equal or exceed the quota, the candidate is successful.

Clause 7 deals with multiple candidates with a surplus, but only in the context of working out which one to deal with first.

In plain(ish) English, clause 6 says you calculate the running total for each candidate after each surplus is distributed. If a candidate reaches the quota at that count, they are a successful candidate, which means they are no longer able to receive a next available preference at a subsequent count.

In your scrutiny sheet example, Williams is elected at count 22, and should not receive any further preferences at count 23.

I'm very puzzled as to how the program allows this. It is a basic concept that, once a candidate reaches the quota at a count, they are not eligible to receive any further preferences at a later count.

Regards

Phil Green

OFFICIAL

Hi Phil, as discussed would you mind running your eye over the attached scrutiny sheets to confirm what I believe to be two issues. The first is that Bethany Williams, having been elected following the distribution of Braddock's surplus, continues to receive votes from Bernie Brennan's surplus distribution. Then, when distributing Williams' own surplus, the system appears to combine the two parcels (of different values).
